EDUCATION

Auburn University

Bachelor in Software Engineering; GPA: 3.5

Auburn, AL

Expected December 2027

EXPERIENCE

Software Engineering Intern

Jan. 2026 – May 2026

Room2Room Movers

Auburn, AL

- Build and maintain backend services using RESTful APIs, Firebase, and Azure Functions that power internal tools used by 30+ field operators daily
- Design end-to-end data flows for new features, handling request validation, serverless function logic, and database writes across a multi-service architecture
- Debug production incidents through runtime inspection and log analysis, resolving state-management and data-sync issues that impacted scheduling reliability
- Work in a CI-driven workflow with Git branching, Jira sprint planning, pull request reviews, and automated build checks

Software Engineering Intern

Sep. 2025 – Present

OCV, LLC

Opelika, AL

- Migrated 100+ mobile applications to updated build configurations and deployment pipelines, reducing build failures across iOS and Android release infrastructure
- Closed 150+ production tickets spanning crash diagnostics, configuration errors, and deployment issues across 100+ application repositories
- Managed release coordination with QA and product teams, maintaining weekly App Store and Google Play submission cadences through Git-based version control

PROJECTS

Chess Engine | C++, CMake, Linux

- Built a chess engine in C++ with full legal move generation, board state management, and an interactive CLI for human-vs-engine play
- Implemented minimax search with alpha-beta pruning, achieving 5+ ply search depth in under 2 seconds through move ordering and evaluation optimizations
- Designed a positional evaluation function using material weighting and piece-square tables to guide strategic decision-making
- Compiled and tested on Linux with CMake; structured as modular translation units with separate headers for board, search, evaluation, and move generation

Enterprise Expense Management API | Java, Spring Boot, PostgreSQL, Docker

- Layered Spring Boot REST API with JWT authentication and role-based access control via Spring Security, supporting multi-step expense approval workflows with business-rule enforcement
- Transactional PostgreSQL persistence through Spring Data JPA with entity relationship mapping, audit logging, and cascading operations
- Integration-tested end-to-end with Testcontainers running containerized PostgreSQL in Docker; API documented with OpenAPI/Swagger

Trackr | TypeScript, Node.js, Express, PostgreSQL, Prisma

- Designed a Node.js/Express API with 25+ REST endpoints across 7 route modules; 7-table PostgreSQL schema with cascading deletes, auth middleware, rate limiting, and CORS
- Deployed across Netlify and Railway with a reverse proxy connecting frontend and API through 6 service-layer modules handling business logic and data access

TECHNICAL SKILLS

Languages: C++, Java, Python, TypeScript, JavaScript, SQL, Bash, HTML, CSS

Frameworks: Spring Boot, Node.js, Express, React, Prisma, GraphQL, JUnit, Testcontainers

Infrastructure: Linux, Docker, PostgreSQL, Firebase, Azure Functions, Git, CMake, Jenkins, GitHub Actions, CI/CD

Tools: GitHub, Jira, Figma, Vim
